Changing Play Speed
Windows Media Player

Change the playing speed
You may need to change the playing speed of a CD or DVD. You can do that in Windows Media Player from the players screen. Not all content can be played at different speeds.

To adjust the play speeds
• In Windows Media Player, begin playing the content.
• Click the Now Playing tab, click the Select Now Playing options button, (just beneath the tab).

• Choose Enhancements, and select Play Speed Settings.

• In the Enhancements pane, do one of the following:
  ▪ Move the Play Speed slider to the speed at which you want to play the content. OR
  ▪ Click either, the Slow, Normal, or Fast links.
